

TK200GL

Automatic Carbide
Sawing Machine

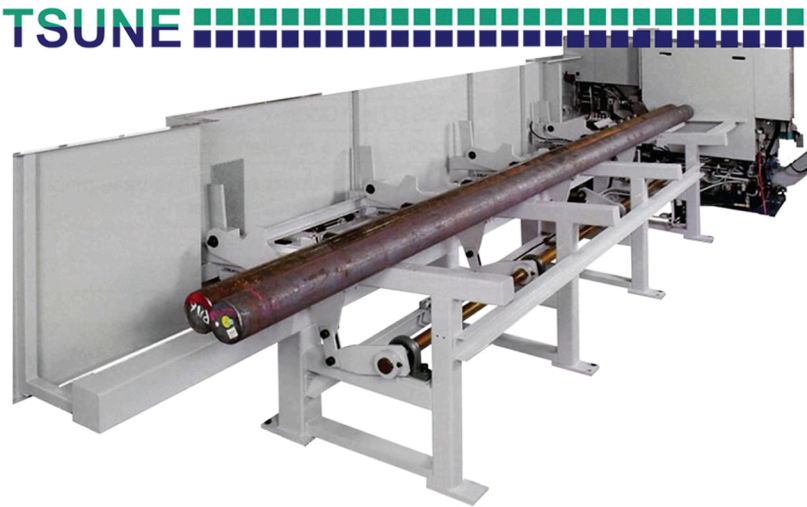

Marmon/Keystone

COLD SAW

When Marmon/Keystone first opened for business in 1907, as Keystone Pipe and Supply, the common method for cutting product was either manual pipe cutters, or specialized chain pipe cutting tools. Marmon/Keystone evolved as the industry grew adopting more efficient methods to deliver cut to length pieces of tubing, pipe and bar to our customers. Today's high production cutting requires sawing equipment with the proper balance of precision, simple operation, and reliability, while giving due consideration to environmental concerns.

The TK-200GL is a fully automatic sawing machine that has been developed by combining Tsune's long experience with the latest in machine design technology. Equipped with a carbide/cermet tipped saw blade, the TK5C-200GL provides close tolerance parts with a CNC control of all cutting parameters with minimum operator intervention.

Introducing the Tsune TK200GL Automatic Carbide Sawing Machine

Marmon/Keystone's investment in Tsune cold saw technology allows us to be quicker to market with cut to length tube, pipe and bar while delivering higher quality, than conventional methods.

Customers can expect
Cut material clean and free of chips and burrs, safely packaged and delivered directly to their dock

Ability to handle a wide range of quantities, from a few pieces to thousands

Output sorting

Chip removal

Safety

We can cut
Round tubes and HSS
Bar
Pipe
Pieces less than an inch

Item		TK200GL
Saw Blade Diameter		2.17ft.
Capacity	Round	1.181-8in.
	Square <small>*requires chain loader</small>	1.181-7.3in.
	Material Length	10-20ft. (standard magazine)
Cutting	Cut-off Length	0.591in.-∞ (over 3.937in. requires outfeed support)
	Trim Cut Length	No trim or 0.591-1.97in.
	Remnant End Length	3.346in. (cut-off length+kerf+3.346in)
